Quality Cancer Care

- The degree to which cancer services increase the likelihood of desired health outcomes and are consistent with current professional knowledge *(Institute Of Medicine 2013)*

Quality Cancer Care

- The degree to which cancer services increase the likelihood of desired health outcomes and are consistent with current professional knowledge (IOM 2013)
- Components according to ECCO:

Quality Cancer Care

- The degree to which cancer services increase the likelihood of desired health outcomes and are consistent with current professional knowledge (IOM 2013)
- Components according to ECCO:
  - Engaged patients
  - Adequately staffed, trained and coordinated workforce
  - Evidence based cancer care
  - A learning health care information technology system for cancer care
  - Translation of evidence into practice, quality measurement and performance improvement
  - Accessible and affordable cancer care

Quality Cancer Care

- The degree to which cancer services increase the likelihood of desired health outcomes and are consistent with current professional knowledge (IOM 2013)
- Components according to ECCO:
  - Engaged patients
  - Adequately staffed, trained and coordinated workforce
  - Evidence based cancer care
  - A learning health care information technology system for cancer care
  - Translation of evidence into practice, quality measurement and performance improvement
  - Accessible and affordable cancer care

Key Challenges

ECCO's viewpoint as standard for HC professionals

Key Challenges

ECCO's viewpoint as standard for HC professionals

- Changing medical care:
  - ➔*Concentration/centralisation*
  - ➔*Personalised medicine*
  - ➔*Omics*
- Complex process – coordination of levels of care, providers and health professionals
- Role of patients – centricity / consumer/ advocate
- Quality of survival
- Inequalities – access/ affordability

Key Challenges

ECCO's viewpoint as standard for HC professionals

- Changing medical care
- Coordination of complex processes:
  - ➔ *Levels of care*
  - ➔ *Providers/institutions*
  - ➔ *Health professionals*
- Role of patients – centricity / consumer/ advocate
- Quality of survival
- Inequalities – access/ affordability

Key Challenges

ECCO's viewpoint as standard for HC professionals

- Changing medical care
- Complex process – coordination of levels of care, providers and health professionals
- Role/position of patients:
  - ➔ *Centricity*
  - ➔ *Consumer*
  - ➔ *Advocate*
- Quality of survival

Key Challenges

ECCO's viewpoint as standard for HC professionals

- Changing medical care
- Complex process – coordination of levels of care, providers and health professionals
- Role of patients – centricity / consumer/ advocate
- Quality of survival:
  - ➔*Rehabilitation*
  - ➔*Survivorship*
  - ➔*Oncogeriatrics*
- Inequalities – access/ affordability

Key Challenges

ECCO's viewpoint as standard for HC professionals

- Changing medical care
- Complex process – coordination of levels of care, providers and health professionals
- Role of patients – centricity / consumer/ advocate
- Quality of survival
- Inequalities:
  - ➔ *Access*
  - ➔ *Affordability*

Role of scientific societies / organisations

- Increase involvement in health care and its organisation ➔ *through our members*
- Oncopolicy – united voice on common policy issues – critical mass
- New approaches in setting priorities

Role of scientific societies / organisations

- Increase involvement in health care and its organisation
- Oncopolicy – united voice on common policy issues – critical mass ➔ *all together*
- New approaches in setting priorities

Role of scientific societies / organisations

- Increase involvement in health care and its organisation
- Oncopolicy – united voice on common policy issues – critical mass
- New approaches in setting priorities

➔ *all together* ➔ *ERQCC*

➔ *individual* ➔ *HERO; Benefit Scale; …*

CANCON's contribution according to ECCO (1)

Key achievements for the 4 chapters

CANCON's contribution according to ECCO (1)

- **Overall:** consistent quality approach for National Cancer Control Programmes
- Cancer screening: National structures for governance; coordination and feedback, registration and monitoring
- Integrated cancer control: Various valid examples exists at national level – many questions still remain - lack of common ground for practical implementation?
- Community level cancer care: diversity linked to national characteristics – blueprint for cancer patient pathway in after care at political agenda for discussion but far from implementation
- Survivorship and rehabilitation: common ground and will for implementing a comprehensive « Survivorship care plan »

CANCON's contribution according to ECCO (1)

CANCON contribution according to ECCO (2)

Concepts behind achievements of the 4 chapters

CANCON contribution according to ECCO (2)

- Value of shared experience and learning through comparative process
- Common ground and understanding to trigger practical implementation
- Political agenda setting both at European but also National level

CANCON contribution according to ECCO (2)

- Value of shared experience and learning through comparative process
- Common ground and understanding to trigger practical implementation
- Political agenda setting both at European but also National level

CANCON contribution according to ECCO (2)

- Value of shared experience and learning through comparative process
- Common ground and understanding to trigger practical implementation
- Political agenda setting both at European but also National level

Way forward

= *on the road to become a very valuable instrument*

Way forward

- Continued support of ECCO and its members societies in improving quality cancer care through multidisciplinarity and oncopolicy

➔ *Collaboration with all stakeholders*

- Continue to inform policy-makers positions to facilitate change to the organisation and structure of health systems to support cancer control
- ERN as a way of promoting cooperation amongst clinicians and hospitals for patient care as well as to share knowledge, expertise and improve outcomes
- Workforce: training (both knowledge & skills – e.g. CANMEDS), cross border mobility
- Collaboration to bring research outcomes into clinical practice

Way forward

- Continued support of ECCO and its members societies in improving quality cancer care through multidisciplinarity and oncopolicy

- Continue to inform policy-makers positions to facilitate change to the organisation and structure of health systems to support cancer control

  ➔ *As a professional/scientific organisation: evidence based & multidisciplinary*

- ERN as a way of promoting cooperation amongst clinicians and hospitals for patient care as well as to share knowledge, expertise and improve outcomes

- Workforce: training (both knowledge & skills – e.g. CANMEDS), cross border mobility

- Collaboration to bring research outcomes into clinical practice

Way forward

- Continued support of ECCO and its members societies in improving quality cancer care through multidisciplinarity and oncopolicy
- Continue to inform policy-makers positions to facilitate change to the organisation and structure of health systems to support cancer control
- European Reference Networks as a way of promoting cooperation amongst clinicians and hospitals for patient care as well as to share knowledge, expertise and improve outcomes
- Workforce: training (both knowledge & skills – e.g. CANMEDS), cross border mobility
- Collaboration to bring research outcomes into clinical practice
